Exceptional Technology with conventional materials

Xair is born from INABA's appreciation of traditional Japanese craftsmanship and the technology of European innovative design.

This is a breakthrough of standard, a challenge of established knowledge, a new standard of function, comfort and beauty. Our passion for future creation is what drives us forward. Traditional craftsmanship is still the focus of INABA and our foundation to future exploration and exciting challenges ahead!

Total Comfort

Comfortable design to suit your sitting positions

Xair develops "Air Lumbar Support & 3D Mesh" with advanced technology. It offers comfort and support to users of different figures with different sitting positions, catering to various movements. You can adjust and tilt the chair to relax and feel the comfort after long hours of work and meeting.

Air Lumbar Support

The Air Lumbar Support is the most important part of the chair. It provides a firm lumbar protection to user and adjust the support to the back according to users' movement to alleviate tiredness.

Use the lever to adjust the height of the chair and tilting to the position that provides the best support to the back.

The air pressure of Air Lumbar Support can be adjusted with Air System according to the figure and preference of user. Press the button of increasing pressure, Lumbar Support will expand and it will shrink to release air if you press the button of reducing pressure.

Seat

Mesh Seat Back

It employs quality breathable porous fabrics as materials to provide flexible support to users' back.

Low Repulsion Urethane + 3D Mesh Seat

Use of low repulsion urethane to disperse body pressure, alleviating the burden from long-time sitting. Employ spacer fabric as seat covers, incorporating breathability and buffering nature to offer comfortable support.

Functional Simplicity

Universal, easy operation for anyone

Xair employs one-button operation for its designs which makes them easy to use.

Adjust each part of the seat with smooth, easy operation and feel the best comfort with your sitting position. In addition, you can adjust the seat with the lever or button while sitting on the chair.

The control panel for back support is situated at the back of the chair. You can adjust the level of comfort with ease while sitting.

By turning the knob, you can adjust the tilt tension.

The operation and adjustment of each part of the seat is easy, making the chair design simple and beautiful from every perspective.

The design is remarkable even to the smallest details, showcasing the spirit of traditional Japanese craftsmanship that we pursue.

D.T.S.L.® (DirectTouch · Sitting Lever)

The adjuster of seat position and reclining are arranged at the side of the chair, enabling an easy operation for users to adjust the seat that brings best comfort to them.

Xair

Adjustability

Adjust your seat position with flexible adjustment functions

By adjusting the different functions of the chair, you can find the position that best relaxes your tension after a day of busy work.

The adjustment functions exist at the chair side, chair back, armrest and headrest. You can adjust the chair from all direction, realizing stability and comfort through flexible adjustments.

Adjust the armrest horizontally in 5 levels (40mm) according to comfortability.

The angle of armrest can be adjusted to 5 different degrees (45° inwards and 15° outwards with 15° intervals)

Adjust the armrest vertically in 5 levels by uplifting it (64mm) according to your comfortability

Adjust the lever located at the side of the chair to realize 5 levels (50mm) of seat depth.

Adjust the lever at the right side of the chair to regulate the height of the chair (120mm).

Adjust the headrest vertically and horizontally to a position that best support your head.

Reclining seat

You can adjust the seat back to 4 reclining degrees (0°-27°). The tilting degree of the chair is based on the reclining degrees. You can enjoy a relaxing moment by adjusting the chair to a reclining seat position.

27°

The chair back is made of Backrest suspension to absorb shock in order to provide a concrete support to the back.

Colour

The combination of spacer fabric and low rebound urethane sheet comes in 8 different high-end colors which create an office dynamic with different innovative designs and development.
